

EMU

ELECTRIC MINE UTILITY

The Pillar Innovations EMU will revolutionize the way you think about electric mine vehicles. The EMU is not a remanufactured golf cart, it is a purpose-built utility vehicle designed to stand up to the rigors of everyday mine duty. From spooling and retrieving mine cables, to moving material, to aiding in the transport of injured miners, the EMU is easily configured to handle a multitude of tasks. So leave the carts to the caddies and jump on an EMU.

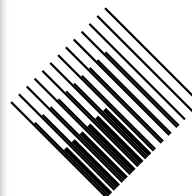

Independent suspension is designed to easily traverse even the roughest mine terrain all while providing a stable ride for heavy payloads. Rear suspension is self-leveling to eliminate rear end squat and maintain ground clearance when heavily loaded.

- Seat is wide enough to comfortably seat two miners with their gear
- 50 peak hp electric motor has the power to go up to 15mph
- Selectable low range and 4-wheel drive provide extra grunt to tow loads of up to 2000-lbs.
- Electronic Power Steering helps navigate through tight entries while armor protects the front end
- Front mounted hydraulic lift system allows you to mount cable spoolers, forks, buckets and other accessories capable of moving 500 lb. loads

Configurations:

- Cable Spooler
- Plow
- Forks
- Scoop
- EMT package
- Fire Fighting package
- Rock Dusting package
- Trailer
- Tool boxes
- Winches
- Air Compressors
- Enclosed Cabs
