

INDUSTRIAL THIN CLIENT

Pillar's Industrial Thin Client computer station is built specifically for industrial environments. Its fanless design won't be bogged down by dusty and dirty environments. The unit powers up when plugged in and connects to a Terminal Server via an industrial ethernet port.

Pillar's thin client can be completely operated via its touch screen - eliminating the hassle of extra accessories and cords. However, if a keyboard and mouse is preferred for the application, the unit's two easy-access USB ports can be utilized.

The thin client is mounted on a 180° swivel that allows it to be mounted in a variety of places depending on the need.
